Yueqing Xing

Cybersecurity undergraduate focused on reliable machine learning

Nanjing, China
xingyueqing1@gmail.com
github.com/xingyueqing1-source

EDUCATION

Nanjing University of Science and Technology
B.Eng. in Cybersecurity
School of Cyber Science and Engineering
Sep 2023 - Jun 2027 (expected)

GPA
3.72 / 4.00
Weighted average: 88.71 / 100
Rank: 4 / 51 (top 7.8%)

RESEARCH INTERESTS

- Machine Learning
- Recommender Systems
- Matrix Completion
- Uncertainty Quantification

TECHNICAL PROFILE

- Python and NumPy
- Conformal prediction
- Low-rank optimization
- ADMM and ablation studies
- Data visualization

ENGLISH

CET-4: 635
CET-6: 647

SELECTED HONORS

2025-2026
National Scholarship

2026
MCM Meritorious Winner

2024
NECCS National Grand Prize

2024
NECCS Finals: 1st in Speech, 2nd in Debate

Additional
NJUST Outstanding Student Scholarship, Second Class (5 awards)

2024
FLTRP Vocabulary Competition, Jiangsu First Prize

2024
Chinese Mathematics Competition, Jiangsu Third Prize

Additional
Outstanding League Member; Excellent Participant in Scientific and Technological Activities

PROFILE

Fourth-year cybersecurity undergraduate developing reliable machine learning methods with finite-sample guarantees. Current work centers on conformal inference for matrix completion, with an emphasis on distribution shift, model misspecification, and reproducible empirical evaluation.

RESEARCH EXPERIENCE

Conformalized 1-Bit Matrix Completion
Mar 2025 - Jul 2026

Yueqing Xing, Siyuan Wu, Ji Cui, Liangliang Yuan
Accepted, TrustRS @ IEEE ICDM 2026 | Project Lead

- Proposed C1B-MC, a distribution-free framework for uncertainty quantification in binary matrix completion, with odds-ratio weighting for covariate shift.
- Derived finite-sample marginal coverage bounds with infinity-norm truncation; implemented low-rank factorization with log-barrier optimization and validated target coverage on simulated and MovieLens data.
- Developed an observable hinge-score variant and stress-tested the method under model misspecification and overparameterization, where asymptotic baselines lost coverage.

The Matrix Regression Model Based on Elastic Net and Its Application in Face Recognition
Jan 2026 - Jun 2026

Liangliang Yuan, Yueqing Xing, Siyuan Wu, Jiacheng Yin
Accepted, ICETCI 2026 | Core Member

- Developed the ENNMR application framework, combining Elastic Net regularization with nuclear-norm matrix regression to preserve image structure while encouraging sparse coefficients.
- Contributed to ADMM implementation and experiments on Extended Yale B and AR, including accuracy ablations and finite-iteration convergence analysis.
- Evaluated robustness under illumination changes and contiguous occlusion and visualized convergence behavior across optimization settings.

Feedforward Neural Network from First Principles
Sep 2024 - Nov 2024

Independent project
NumPy implementation | MNIST validation accuracy: 84.8%

- Derived and implemented matrix layers, ReLU, Softmax, backpropagation, and gradient descent without automatic differentiation; evaluated learning rate, iteration count, and hidden-layer width.
- Built MNIST preprocessing and one-hot encoding pipelines and conducted multi-dimensional hyperparameter ablations.

SELECTED PUBLICATIONS

1. **Y. Xing**, S. Wu, J. Cui, and L. Yuan. "Conformalized 1-Bit Matrix Completion." Accepted to TrustRS: Workshop on Trustworthy Recommender Systems across Learning, Relearning, and Unlearning at IEEE ICDM 2026.
2. L. Yuan, **Y. Xing**, S. Wu, and J. Yin. "The Matrix Regression Model Based on Elastic Net and Its Application in Face Recognition." Accepted to ICETCI 2026.

LEADERSHIP AND SERVICE

Peer Mentor, Zhixin College, NJUST
Sep 2025 - Present
Mentor junior undergraduates on coursework and career planning and support academic exchange and student well-being activities.

Student Assistant, Jiangyin Campus Student Affairs Office
Oct 2023 - Jun 2025
Supported student services, document drafting, ID-card applications, and preliminary medical-insurance reimbursement review.
